DETAILED ACTION

1. This office correspondence is response to the applicant's continuation of examination filed on 05/16/2008.

Allowable Subject Matter

2. Claims 1, 3-22, and 24-42 are allowed. The following is an examiner's statement of reasons for allowance: In interpreting the claims, in light of the Specification and the applicant's amendments filed on 02/08/2008, the Examiner finds the claimed invention to be patentably distinct from the prior art of record.
3. Jong et al (US patent app. Pub. 20050069138) is concerned obtaining information unique to the computing device, the obtained information being selected from a group consisting of a hardware identification generated for the computing device based on one or more identifications of hardware of the computing device, a specific time associated with the computing device.
4. Johnson et al (US patent app. Pub. 20030163718) is concerned disclosing that the use of a hash function to generate the actual address.
5. However the totality of each element and/or step in claims 1, 3-22, and 24-42 are not alluded to in the combined art of Jong and Johnson. Their teachings either individually or in combination failed to teach or suggest the method recited in claim 1. More specifically, the combination of Jong and Johnson does not teach or suggest

"generating a specific number of locations on the computing device at which at least a portion of the state store is to be stored, generating the specific number of pseudo-random file names and the specific number corresponding paths based at least in part on the obtained information by applying a one-way function to data including the obtained information and employing a resulting output of the function to the define the file named and the paths, wherein the generated file names and corresponding paths are likewise substantially unique to the computing device" as recited in claim 1.

Similarly, the combination of Jong and Johnson does not teach or suggest "pairing respective one of the specific number of generated file names and the specific number of generated paths to form the location on the computing device; and storing the state store on the computing device according to the specific number of generated locations on the computing device" as recited in claim 1. Accordingly, claim 1, and 22 is allowable over the combination of Jong and Johnson. So, Claims 1, 3-22, and 24-42 are allowable by virtue of their dependency upon claim 1, and 22 and also due to additional limitations recited in these claims. Therefore, for the foregoing reasons, examiner withdraws of the rejection of claims 1, 3-22, and 24-42 under 35 USC §103(a) as being obvious over Jong in view of Johnson.

7. However, the prior art of record fails to teach or suggest some of the steps of the present claim invention. Examiner performed an updated search and unable to find any prior art to disclose all the steps mentioned in the independent claims.

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

9. Claims 1, 3-22, and 24-42 are patentable.
10. Claims **2, 23** are cancelled.
11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohammad w. Reza whose telephone number is 571-272-6590. The examiner can normally be reached on M-F (9:00-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, MOAZZAMI NASSER G can be reached on (571)272-4195. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
